

FITTING INSTRUCTIONS
 The Master Battery Switch has been designed to eliminate the possibility of the Alternator Circuit being damaged due to a heavy voltage surge, that can occur with the use of a heavy duty single circuit On/Off Switch.
 When the switch is turned to the Off position the engine will be automatically stopped due to the secondary switch function whereby the ignition circuit is cut. This stops the engine which is a safety benefit and a requirement for competition use.
 The Master Battery Switch is also a very effective and simple Anti Theft Device for Cars, Commercial vehicles, Boats and Agricultural vehicles

ELECTRICAL CONNECTIONS.
